Investigation Report — ST21486

Generated 2026-11-03 09:39:25

1. Requirement Lineage

ST21486.

2. Problem Statement

Pivotal fact: Story US11362423 states 'Update OOB Step to determine if member is enrolled in EHIPP + NET Coverage' indicating claims adjudication must detect and handle EHIPP+NET coverage stacking This coverage detection logic is the gating factor for correct claims adjudication - if it fails to identify EHIPP+NET enrollment, claims will adjudicate against wrong benefit structure affecting payment amounts and member liability

3. Impact Analysis, System by System

Plan_Library — Features F1889595, F1889674, F1889613 explicitly reference '[USP] [PL] Medical Flex Plan' enhancements for PE, ACE, and CBB *Risk:* New FlexWork product type configuration may not propagate correctly to downstream benefit consumers if attribute mappings are incomplete

Cirrus_Core_CISL — Multiple features reference member enrollment/maintenance including F1958960 'FLEXWORK Mbr Mgmt--Continued Testing' and F1835361 'Insuring Rules/Service Area Validation' *Risk:* New product type and contract option type validation may reject valid enrollments or accept invalid ones if rule precedence is misconfigured

Cirrus_Product_Configuration — Story US11176378 explicitly references 'FlexWork: Medical, Pharmacy & Value-Add Bundle Configuration' *Risk:* Bundle configuration mismatches could cause downstream claims to adjudicate against wrong benefit structure

OBM — Capability C247982 'FlexWork MG Installation using OBM' and feature F1850069 'BASICS - FlexWork FPP Rate Support OBM' indicate installation pathway *Risk:* Installation failures may be silent if OBM validation rules don't recognize new FlexWork product attributes

SAMX_Stepwise — Feature F1778055 'FlexWork Support Multiple member group set up' indicates enrollment processing changes *Risk:* Multi-member group setup may fail ordering constraints if SAMX doesn't handle new contract option types in correct sequence

COM360 — Feature F1805595 'Fulfillment - COM360 FlexWork Product Migration' explicitly scopes fulfillment changes *Risk:* Document generation may produce incorrect content if FlexWork product attributes aren't mapped to COM360 templates

DOC360 — Features F1944040 'Integration with Doc360 EOBs' and F1944039 'Integration with Doc360 Plan Documents' indicate document integration *Risk:* Document retrieval may fail if FlexWork document types aren't registered in DOC360 taxonomy

BRMS — Feature F1905482 'FlexWork: BRMS Customer Intake & Eligibility Management' explicitly scopes billing rules *Risk:* Billing rule evaluation may produce incorrect premiums if

FlexWork rate structures aren't properly configured

BASICS — Features F1850068 'BASICS - FlexWork Non-Medical Commission' and F1903971 'BASICS - FlexWork Two-Member-Group Service Fee Processing' indicate billing changes *Risk:* Commission calculations may be incorrect if producer assignment rules don't handle FlexWork contract option levels

Claim_Adjudication_Cirrus — Multiple features including F1795915 'FlexWork Claim Adjudication - Original Events - Claim Framework' and F1964635 'Fixed Cash Benefit Administration' indicate claims changes *Risk:* Claims may adjudicate incorrectly if C3/C4 adjudication type logic doesn't properly handle EHIPP+NET coverage stacking

OFIN — Features F1891552 and F1891555 'FlexWork - OFIN: Claim Payment/Presentment' explicitly scope financial processing *Risk:* Payment processing may fail or produce incorrect amounts if FlexWork claim types aren't recognized by OFIN payment rules

Payment_Engine — Story US11362450 references 'Update Final Net pay logic to exclude C3 and C4 claims from Surcharge Calculation' *Risk:* Surcharge exclusion logic may incorrectly apply to non-FlexWork claims if adjudication type filtering is too broad

Nimbus — Features F1715852 'Nimbus Test Support for migration' and F1949897 'Nimbus [API] [Claims] [Flexworks] Analysis and mapping support' indicate event streaming changes *Risk:* Event propagation may drop FlexWork-specific attributes if Nimbus schema doesn't include new fields

BE_Portal — Capability C253487 'FlexWork- B&E portal' and multiple UI stories reference portal updates *Risk:* Portal may display incorrect or missing FlexWork member data if API contracts aren't updated

MyUHC — Features F1944035 'Mobile App', F1944036 'Group Level Security', and F1944028 'Integration with USP Claims API' indicate member portal changes *Risk:* Member self-service may fail if FlexWork product types aren't recognized by portal security rules

ACET — Feature F1944085 'Update Contact Us for USP Members' indicates constituent service changes *Risk:* Service representatives may not see FlexWork member details if ACET integration isn't updated

Optum_Rx — Feature F1944046 'Integration with OptumRx' explicitly scopes pharmacy downstream *Risk:* Pharmacy eligibility may fail if FlexWork member attributes aren't propagated correctly

Dental — Feature F1944044 'Integration with Dental' explicitly scopes dental downstream *Risk:* Dental eligibility streaming may fail silently if FlexWork product type isn't recognized

Vision — Feature F1944045 'Integration with Vision' explicitly scopes vision downstream *Risk:* Vision eligibility may not propagate if FlexWork bundle configuration isn't mapped

B360 — Feature F1889614 references 'Ben Sum/SBCs' indicating benefit language generation *Risk:* SBC content may be incorrect if FlexWork benefit structures aren't mapped to B360 templates

TRIDENT — Fulfillment features indicate document processing for ID cards and communications *Risk:* Communication triggers may not fire for FlexWork events if event types aren't registered

FTS_FISL_FSDB_PSGL_RPS — Feature F1929194 'OFIN FlexWork: Entity Reserve Test Only Support - IDB Spread' indicates finance downstream *Risk:* Financial reconciliation may fail if FlexWork transactions aren't properly tagged for finance feeds

BOSS — Downstream membership processing required for FlexWork member migration per capability C259173 *Risk:* Membership load may fail if FlexWork member attributes don't

conform to BOSS schema expectations

Explicitly out of scope: API testing; Database validation; Batch validation; Splunk/log validation; Performance/load testing; Security testing; Production deployment validation; UDW/data warehouse reporting (C252792 marked Will Not Implement); Client Reporting Stratus (C227815 marked Will Not Implement)

4. Optics Cross-Check

No Optics project ID resolved for this ticket.

5. Test Plan

Strategy: This is pre-release gating focused on end-to-end integration validation across the FlexWork migration from UHOPS to USP, ensuring critical product configuration, enrollment, claims adjudication, and financial workflows function correctly before production deployment.

Entry criteria:

• USP Plan Library environment available with FlexWork Medical product templates and EHIPP+NET coverage configurations enabled
• OBM (Online Benefit Manager) integration environment configured with FlexWork-specific contract option types and product type mappings
• Test FlexWork groups provisioned with Chevron 1, Chevron 2, Chevron 3, Coverage and Family (C+F) logic configurations
• Claims Framework environment configured with C3/C4 adjudication types and Fixed Cash Benefit rules
• OFIN, BRMS, BASICS, and COM360 integration endpoints available and configured for FlexWork entity reserve and billing workflows
• Test member profiles created representing subscriber, dependent, and incomplete enrollment scenarios with QE (Qualifying Event) logic
• Migration test data set available with sample UHOPS groups and members ready for USP migration validation

Exit criteria:

• All 12 existing test cases executed with zero critical defects and no more than 2 high-severity defects with approved workarounds
• End-to-end transaction traceability confirmed from Plan Library product configuration through claims adjudication to OFIN payment reconciliation for at least 3 complete member journeys
• FlexWork-specific financial tagging validated in entity reserve administration with reconciliation to BRMS billing and commission calculations within 0.01% tolerance

- Migration validation completed for at least 10 UHOPS groups with member accumulator balances, enrollment data, and claims history successfully transferred to USP with data integrity verification
- Prompt Pay compliance validated with EOB and PRA generation meeting regulatory timelines for all adjudication scenarios
- ID card fulfillment through COM360 confirmed for all enrollment types with correct FlexWork product branding and member identifiers

Area	Priority	Why
FlexWork Product Configuration and Plan Library Setup	CRITICAL	Foundation for all downstream processes; incorrect product configuration with EHIPP+NET stacking will cascade failures across enrollment, claims, and billing.
Group Installation via OBM with FlexWork-Specific Contract and Product Types	CRITICAL	New business and migration groups must be correctly provisioned with FlexWork product types to enable proper enrollment and claims processing workflows.
Member Enrollment with Chevron and QE Logic	CRITICAL	Chevron 1/2/3 and Coverage+Family logic are FlexWork-specific enrollment rules that determine eligibility and coverage effective dates critical to claims adjudication accuracy.
Claims Adjudication with C3/C4 Types and Fixed Cash Benefits	CRITICAL	FlexWork uses unique C3/C4 adjudication types and Fixed Cash Benefit administration that differ from standard USP claims processing and directly impact member financial outcomes.
Claims Payment through OFIN and Entity Reserve Reconciliation	CRITICAL	Financial accuracy and entity reserve administration are core to FlexWork's self-funded model; payment discrepancies will cause customer billing disputes and regulatory issues.
UHOPS to USP Migration Data Integrity	CRITICAL	Migration of 406 user stories worth of groups and members requires validation that accumulator balances, enrollment history, and claims data transfer without loss or corruption.
Billing and Commission Processing through BRMS and BASICS	CRITICAL	Broker compensation and customer billing must accurately reflect FlexWork-specific financial tagging and surplus shared revenue calculations to ensure correct invoicing.
EOB/PRA Generation and Prompt Pay Compliance	HIGH	Regulatory compliance for timely member communication and payment processing is mandatory; failures result in penalties and member satisfaction issues.
ID Card Fulfillment through COM360	HIGH	Member-facing deliverable that impacts first impressions and provider network access; incorrect cards delay care access and generate service calls.
Eligibility Inquiry EDI 270/271 Transactions	HIGH	Provider real-time eligibility verification is essential for FlexWork members to receive care; EDI transaction failures block service authorization.
Accumulator Balances Transfer and Validation	HIGH	Migrated members' deductible and out-of-pocket accumulator balances must be accurate to prevent incorrect cost-sharing and member appeals.
Benefit Rejournals and Claims Adjustments	HIGH	Post-adjudication corrections are common in FlexWork claims; rejournal logic must correctly update accumulators and financial reserves without creating duplicate payments.

6. Test Cases, Fully Detailed (12)

TC-01 — CRITICAL — FlexWork Medical Product Configuration in Plan Library with EHIPP+NET Coverage Stacking

Objective: Validate that FlexWork Medical product with EHIPP+NET coverage can be configured in Plan Library with correct benefit stacking logic, subcontract indicator, and financial protection attributes as defined in F1893862 and C247972.

Preconditions: User is authenticated with valid credentials; Environment is accessible and responsive; Database backups are current; Test data is isolated from production; Audit logging is enabled; All impacted systems are in sync; API connections between systems are established

Test data: FlexWork Medical product type, EHIPP+NET coverage option, Subcontract indicator = Y, Financial protection attributes including entity reserve thresholds, Test customer ID for product assignment

Steps: 1. Log into Plan Library Portfolio Editor. 2. Create new Medical Flex Plan product for FlexWork. 3. Configure EHIPP+NET coverage option with coverage stacking rules. 4. Set subcontract indicator attribute per F1893862. 5. Configure financial protection attributes including entity reserve parameters. 6. Define benefit summaries and SBC requirements per F1889614. 7. Save and validate product configuration. 8. Verify product appears in Cirrus Product Configuration (CBB) per F1889613.

Expected result: FlexWork Medical product successfully created in Plan Library with EHIPP+NET coverage stacking logic configured. Subcontract indicator and financial protection attributes saved correctly. Product synchronized to Cirrus Product Configuration without errors. Benefit summaries and SBC configuration validated in PE.

TC-02 — CRITICAL — FlexWork Group Installation via OBM with New Product Type and Contract Option Type

Objective: Validate end-to-end FlexWork group installation through OBM (C255316, F1982) with new FlexWork product type and contract option type, ensuring all group attributes, demographics, billing contact, producer information, and plan funding type are correctly established in Cirrus Core.

Preconditions: User is authenticated with valid credentials; Environment is accessible and responsive; Database backups are current; Test data is isolated from production; Audit logging is enabled; All impacted systems are in sync; API connections between systems are established

Test data: Test Group ID: FW_GRP_001, Group Name: FlexWork Test Group, Situs State: FL, SIC Code: 8011, Small Group Indicator: Y, Market Segment: Small Business, Plan Funding Type: Self-Funded, Effective Date: 01/01/2026, Next Renewal Date: 01/01/2027, Broker ID: BRK_12345, Billing Contact: John Doe

Steps: 1. Log into OBM and initiate new group installation. 2. Select FlexWork product type and contract option type. 3. Enter group demographics: group name, situs state, SIC ID, small group indicator, market segment. 4. Configure plan funding type (e.g., self-funded, fully-insured). 5. Enter billing contact and producer/broker information with demographics. 6. Set group effective date and next renewal date. 7. Assign FlexWork Medical plan with EHIPP+NET coverage. 8. Submit group installation and monitor OBM workflow completion. 9. Validate group creation in Cirrus Core (CISL). 10. Verify group attributes in B&E portal per master catalog test requirements.

Expected result: FlexWork group successfully installed via OBM with new product type and contract option type. Group appears in Cirrus Core with correct demographics, situs state, SIC ID, small group indicator, market segment, plan funding type, billing contact, and producer

information. B&E portal displays group with parity to Cirrus data including platform group ID, carrier name, product plan name, and next renewal date.

TC-03 — CRITICAL — FlexWork Member Enrollment - Subscriber with Chevron 1 and QE Logic

Objective: Validate FlexWork subscriber enrollment with Chevron 1 qualification event (QE) logic per F1888401, ensuring member demographics, plan details, SSN, date of hire, and effective date are correctly processed through Cirrus Member Management and visible in B&E portal.

Preconditions: User is authenticated with valid credentials; Environment is accessible and responsive; Database backups are current; Test data is isolated from production; Audit logging is enabled; All impacted systems are in sync; API connections between systems are established

Test data: Member ID: FW_MEM_001, First Name: Jane, Last Name: Smith, Gender: F, DOB: 05/15/1985, SSN: 123-45-6789, Date of Hire: 01/15/2026, Member Effective Date: 02/01/2026 (Chevron 1 QE), Address: 123 Main St, Orlando, FL 32801, Plan: FlexWork Medical with EHIPP+NET

Steps: 1. Access member enrollment interface for FlexWork group FW_GRP_001. 2. Initiate subscriber enrollment with Chevron 1 QE (e.g., new hire). 3. Enter member demographics: first name, last name, gender, DOB, SSN. 4. Enter date of hire and calculate member effective date per Chevron 1 QE logic. 5. Assign FlexWork Medical plan with EHIPP+NET coverage. 6. Enter member address and validate service area per F1835361. 7. Submit enrollment and monitor Cirrus Member Management processing. 8. Validate member record created in Cirrus with correct product type and contract option type per F1920744. 9. Verify member appears in B&E portal with parity to Cirrus data. 10. Confirm member demographics, plan details, SSN, date of hire, and effective date match in B&E portal.

Expected result: FlexWork subscriber successfully enrolled with Chevron 1 QE logic applied. Member effective date calculated correctly based on date of hire and QE rules. Member record created in Cirrus Member Management with FlexWork product type and contract option type. Service area validation passed per insuring rules. B&E portal displays member with correct demographics, plan details (Medical, EHIPP+NET), SSN, date of hire, and member effective date matching Cirrus data.

TC-04 — HIGH — FlexWork Member Enrollment - Add Dependent with Family Chevron 2 and Chevron 3 Logic

Objective: Validate adding dependent to existing FlexWork subscriber using Family Chevron 2 and Chevron 3 qualification event logic per F1893581, ensuring dependent demographics, relationship, and effective date are correctly processed and visible in B&E portal.

Preconditions: User is authenticated with valid credentials; Environment is accessible and responsive; Database backups are current; Test data is isolated from production; Audit logging is enabled; All impacted systems are in sync; API connections between systems are established

Test data: Dependent 1 ID: FW_MEM_002, First Name: John, Last Name: Smith, Gender: M, DOB: 02/10/2026, Relationship: Child, Dependent Effective Date: 02/10/2026 (Chevron 2 - Birth). Dependent 2 ID: FW_MEM_003, First Name: Emily, Last Name: Smith, Gender: F, DOB: 03/01/2024, Relationship: Child, Dependent Effective Date: 03/15/2026 (Chevron 3 - Adoption)

Steps: 1. Access member maintenance interface for subscriber FW_MEM_001. 2. Initiate add dependent transaction with Family Chevron 2 QE (e.g., birth of child). 3. Enter dependent demographics: first name, last name, gender, DOB, relationship (child). 4. Calculate dependent effective date per Family Chevron 2 QE logic. 5. Assign same FlexWork Medical

plan with EHIPP+NET coverage as subscriber. 6. Submit dependent add and monitor Cirrus Member Management processing. 7. Validate dependent record created in Cirrus linked to subscriber. 8. Verify dependent appears in B&E portal under subscriber's family unit. 9. Repeat steps 2-8 for second dependent using Family Chevron 3 QE (e.g., adoption). 10. Confirm both dependents display correct demographics, relationship, and effective dates in B&E portal.

Expected result: Dependents successfully added to FlexWork subscriber with Family Chevron 2 and Chevron 3 QE logic applied. Dependent effective dates calculated correctly based on QE rules. Dependent records created in Cirrus Member Management linked to subscriber FW_MEM_001. B&E portal displays both dependents under subscriber's family unit with correct demographics, relationship (child), plan details (FlexWork Medical with EHIPP+NET), and effective dates matching Cirrus data.

TC-05 — HIGH — FlexWork Member Enrollment - Incomplete Enrollment with Coverage and Family (C+F) Logic

Objective: Validate FlexWork incomplete enrollment scenario with Coverage and Family (C+F) logic per F1893583, ensuring partial enrollment is correctly handled, member status reflects incomplete state, and subsequent completion updates all attributes in Cirrus and B&E portal.

Preconditions: User is authenticated with valid credentials; Environment is accessible and responsive; Database backups are current; Test data is isolated from production; Audit logging is enabled; All impacted systems are in sync; API connections between systems are established

Test data: Member ID: FW_MEM_004, First Name: Michael, Last Name: Johnson, Gender: M, DOB: 08/20/1990, SSN: (initially missing, then 987-65-4321), Member Effective Date: 03/01/2026, Plan: FlexWork Medical with EHIPP+NET. Dependent ID: FW_MEM_005, First Name: Sarah, Last Name: Johnson, Gender: F, DOB: 06/15/2015, Relationship: Child

Steps: 1. Access member enrollment interface for FlexWork group FW_GRP_001. 2. Initiate subscriber enrollment with incomplete data (e.g., missing SSN). 3. Enter partial member demographics: first name, last name, gender, DOB (omit SSN). 4. Assign FlexWork Medical plan with EHIPP+NET coverage. 5. Submit incomplete enrollment and monitor Cirrus Member Management processing. 6. Validate member record created in Cirrus with incomplete status. 7. Verify member appears in B&E portal with incomplete indicator. 8. Complete enrollment by updating member record with missing SSN. 9. Add dependent with C+F logic to complete family enrollment. 10. Validate member status updated to active in Cirrus and B&E portal.

Expected result: FlexWork incomplete enrollment successfully processed with C+F logic. Member record created in Cirrus with incomplete status due to missing SSN. B&E portal displays member with incomplete indicator. Upon completion with SSN and dependent add, member status updated to active in Cirrus. B&E portal reflects completed enrollment with full demographics, SSN, plan details, and dependent information matching Cirrus data.

TC-06 — CRITICAL — FlexWork Claims Adjudication - Original Event with C3/C4 Adjudication Types and Claim Framework

Objective: Validate FlexWork claims adjudication for original claim events using new C3/C4 adjudication types per F1795915 and US11362423-US11362450, ensuring claim framework correctly processes FlexWork benefit configuration, EHIPP+NET coverage stacking, and Medicaid reclamation logic.

Preconditions: User is authenticated with valid credentials; Environment is accessible and responsive; Database backups are current; Test data is isolated from production; Audit logging is enabled; All impacted systems are in sync; API connections between systems are established

Test data: Claim ID: FW_CLM_001, Member ID: FW_MEM_001, Service Date: 03/15/2026, Provider ID: PRV_12345, Procedure Code: 99213, Billed Amount: $150.00, Adjudication Type: C3, EHIPP+NET Coverage: Primary, Medicaid Reclamation: Applicable, Expected Allowed Amount: $120.00, Expected Member Responsibility: $20.00 (copay), Expected Plan Payment: $100.00

Steps: 1. Submit original medical claim for FlexWork member FW_MEM_001 via Claims Intake. 2. Validate claim passes intake validation per C255314 and F1951370. 3. Monitor claim routing to Claims Adjudication Cirrus with C3/C4 adjudication type. 4. Verify claim framework retrieves FlexWork benefit configuration from BRMS. 5. Validate EHIPP+NET coverage stacking logic applied during adjudication. 6. Confirm Medicaid reclamation logic executed per US11362423-US11362450. 7. Verify claim adjudication completes with correct benefit determination. 8. Validate claim status updated in Cirrus Claims Adjudication. 9. Confirm claim payment amount calculated correctly with EHIPP+NET stacking. 10. Verify claim accumulators updated per F1904035.

Expected result: FlexWork original claim successfully adjudicated using C3/C4 adjudication type and claim framework. Claim intake validation passed per FlexWork product rules. Benefit configuration retrieved from BRMS and applied correctly. EHIPP+NET coverage stacking logic executed, resulting in correct benefit determination. Medicaid reclamation logic applied per configured rules. Claim payment amount calculated accurately. Claim accumulators updated in Cirrus reflecting FlexWork claim processing. Claim status reflects successful adjudication.

TC-07 — HIGH — FlexWork Claims Adjudication - Adjustment and Benefit Rejournal

Objective: Validate FlexWork claims adjustment and benefit rejournal processing per F1795939, ensuring original claim can be adjusted, benefits recalculated with EHIPP+NET stacking logic, and accumulators correctly updated to reflect adjustment.

Preconditions: User is authenticated with valid credentials; Environment is accessible and responsive; Database backups are current; Test data is isolated from production; Audit logging is enabled; All impacted systems are in sync; API connections between systems are established

Test data: Original Claim ID: FW_CLM_001, Adjustment Claim ID: FW_CLM_001_ADJ, Member ID: FW_MEM_001, Original Procedure Code: 99213, Corrected Procedure Code: 99214, Original Billed Amount: $150.00, Corrected Billed Amount: $200.00, Original Plan Payment: $100.00, Adjusted Plan Payment: $130.00, Accumulator Adjustment: +$30.00

Steps: 1. Identify original FlexWork claim FW_CLM_001 requiring adjustment. 2. Submit claim adjustment transaction with corrected procedure code or billed amount. 3. Monitor adjustment processing in Claims Adjudication Cirrus. 4. Verify benefit rejournal triggered with updated claim data. 5. Validate EHIPP+NET coverage stacking logic re-applied during rejournal. 6. Confirm Medicaid reclamation logic re-executed if applicable. 7. Verify adjusted claim payment amount calculated correctly. 8. Validate claim accumulators updated to reflect adjustment (reversal of original + new adjudication). 9. Confirm adjustment claim status updated in Cirrus. 10. Verify financial impact of adjustment reflected in OFIN per C247981.

Expected result: FlexWork claim adjustment successfully processed with benefit rejournal. Original claim benefits reversed and recalculated with corrected data. EHIPP+NET coverage stacking logic re-applied, resulting in updated benefit determination. Medicaid reclamation logic re-executed if applicable. Adjusted claim payment amount calculated accurately. Claim accumulators updated correctly, reflecting reversal of original claim and new adjudication. Adjustment claim status reflects successful processing. Financial impact of adjustment (overpayment or underpayment) correctly reflected in OFIN for recovery or additional payment.

TC-08 — HIGH — FlexWork Claims Adjudication - Fixed Cash Benefit Administration

Objective: Validate FlexWork fixed cash benefit administration per F1964635, ensuring claims for fixed cash benefits (e.g., hospital indemnity) are correctly adjudicated with flat payment amounts independent of billed charges, and accumulators track fixed benefit utilization.

Preconditions: User is authenticated with valid credentials; Environment is accessible and responsive; Database backups are current; Test data is isolated from production; Audit logging is enabled; All impacted systems are in sync; API connections between systems are established

Test data: Claim ID: FW_CLM_002, Member ID: FW_MEM_001, Service Date: 04/01/2026 - 04/03/2026, Provider ID: PRV_67890, Admission Type: Inpatient Hospital, Length of Stay: 3 days, Billed Amount: $15,000.00, Fixed Cash Benefit: $500/day, Expected Plan Payment: $1,500.00 (3 days * $500), Member Responsibility: $0.00

Steps: 1. Submit claim for hospital admission for FlexWork member FW_MEM_001. 2. Validate claim passes intake validation and routes to Claims Adjudication Cirrus. 3. Verify claim framework identifies fixed cash benefit rider in FlexWork plan. 4. Confirm adjudication logic applies fixed cash benefit amount ($500/day) independent of billed charges. 5. Validate claim adjudication calculates total fixed benefit payment based on length of stay. 6. Verify claim payment amount reflects fixed cash benefit (e.g., 3 days * $500 = $1,500). 7. Confirm claim accumulators updated to track fixed benefit utilization. 8. Validate claim status updated in Cirrus Claims Adjudication. 9. Verify claim payment processed through OFIN per C247981. 10. Confirm EOB generated reflects fixed cash benefit payment per C255287.

Expected result: FlexWork fixed cash benefit claim successfully adjudicated with flat payment amount applied. Claim framework correctly identified fixed cash benefit rider in FlexWork plan. Adjudication logic calculated total fixed benefit payment based on length of stay (3 days * $500/day = $1,500) independent of billed charges. Claim accumulators updated to track fixed benefit utilization. Claim payment processed through OFIN. EOB generated and reflects fixed cash benefit payment with clear explanation of benefit calculation.

TC-09 — CRITICAL — FlexWork Claim Payment and Presentment through OFIN with Entity Reserve Reconciliation

Objective: Validate end-to-end FlexWork claim payment processing through OFIN per C247981 and Payment Engine, ensuring claim payments are correctly calculated, entity reserve impacts reconciled per F1891363-F1891396, and payment presentment (check or EFT) issued to provider.

Preconditions: User is authenticated with valid credentials; Environment is accessible and responsive; Database backups are current; Test data is isolated from production; Audit logging is enabled; All impacted systems are in sync; API connections between systems are established

Test data: Claim ID: FW_CLM_001, Payment Amount: $100.00, Provider ID: PRV_12345, Payment Method: EFT, Entity Reserve Impact: +$100.00. Claim ID: FW_CLM_002, Payment Amount: $1,500.00, Provider ID: PRV_67890, Payment Method: Check, Entity Reserve Impact: +$1,500.00. Total Entity Reserve Increase: $1,600.00

Steps: 1. Monitor adjudicated FlexWork claims FW_CLM_001 and FW_CLM_002 in OFIN payment queue. 2. Validate claim payment amounts calculated correctly based on adjudication results. 3. Verify entity reserve impact calculated for each claim per F1891363-F1891396. 4. Confirm entity reserve reconciliation logic applied (reserve increase/decrease). 5. Validate payment presentment method determined (EFT or check) based on provider setup. 6. Submit claims for payment processing through Payment Engine. 7. Monitor payment batch creation and approval workflow. 8. Verify payment issued to provider via EFT or check. 9. Confirm payment status updated in OFIN and Cirrus Claims Adjudication. 10. Validate entity reserve balances updated in Entity Reserve Administration per C247983.

Expected result: FlexWork claims successfully processed for payment through OFIN and Payment Engine. Claim payment amounts calculated correctly based on adjudication results (FW_CLM_001: $100.00, FW_CLM_002: $1,500.00). Entity reserve impact calculated and reconciliation logic applied per configured rules. Payment presentment method determined correctly (EFT for PRV_12345, check for PRV_67890). Payment batch created, approved, and issued to providers. Payment status updated in OFIN and Cirrus Claims Adjudication reflecting successful payment. Entity reserve balances updated accurately in Entity Reserve Administration, reflecting financial impact of FlexWork claim payments.

TC-10 — HIGH — FlexWork EOB and PRA Generation with Prompt Pay Validation

Objective: Validate FlexWork Explanation of Benefits (EOB) and Provider Remittance Advice (PRA) generation per C255287, ensuring timely filing and prompt pay rules are correctly applied, and documents accurately reflect claim adjudication results including EHIPP+NET coverage stacking.

Preconditions: User is authenticated with valid credentials; Environment is accessible and responsive; Database backups are current; Test data is isolated from production; Audit logging is enabled; All impacted systems are in sync; API connections between systems are established

Test data: EOB for Member FW_MEM_001: Claims FW_CLM_001 ($100.00 plan payment, $20.00 member copay) and FW_CLM_002 ($1,500.00 plan payment, $0.00 member responsibility). PRA for Provider PRV_12345: Claim FW_CLM_001, Payment $100.00. PRA for Provider PRV_67890: Claim FW_CLM_002, Payment $1,500.00. Timely Filing Limit: 180 days. Prompt Pay Timeframe: 30 days.

Steps: 1. Monitor FlexWork claims FW_CLM_001 and FW_CLM_002 for EOB/PRA generation trigger. 2. Validate timely filing rules applied during claim adjudication (claim submitted within filing limit). 3. Verify prompt pay rules applied (payment issued within prompt pay timeframe). 4. Confirm EOB generation triggered for member FW_MEM_001 in DOC360. 5. Validate EOB content: claim details, service dates, billed amount, allowed amount, member responsibility, plan payment, EHIPP+NET coverage explanation. 6. Verify PRA generation triggered for providers PRV_12345 and PRV_67890 in DOC360. 7. Validate PRA content: claim details, service dates, billed amount, allowed amount, payment amount, adjustment reasons. 8. Confirm EOB delivered to member address (mail or electronic per preference). 9. Verify PRA delivered to provider address (mail or electronic per preference). 10. Validate document generation status updated in DOC360 and Cirrus.

Expected result: FlexWork EOB and PRA successfully generated in DOC360 with accurate claim adjudication details. Timely filing rules validated during adjudication (claims submitted within filing limit). Prompt pay rules validated (payments issued within prompt pay timeframe). EOB for member FW_MEM_001 contains correct claim details, service dates, billed amounts, allowed amounts, member responsibility, plan payments, and clear explanation of EHIPP+NET coverage stacking. PRA for providers PRV_12345 and PRV_67890 contains correct claim details, payment amounts, and adjustment reasons. EOB delivered to member address per delivery preference. PRA delivered to provider addresses per delivery preference. Document generation status updated in DOC360 and Cirrus reflecting successful delivery.

TC-11 — CRITICAL — FlexWork Billing and Commission Processing through BRMS and BASICS

Objective: Validate FlexWork billing invoice generation through BRMS per F1891363 and commission statement generation through BASICS per master catalog, ensuring group FW_GRP_001 billing charges calculated correctly (family unit or age-based), employee count accurate, and broker commission processed with base commission and service fee details.

Preconditions: User is authenticated with valid credentials; Environment is accessible and responsive; Database backups are current; Test data is isolated from production; Audit

logging is enabled; All impacted systems are in sync; API connections between systems are established

Test data: Group ID: FW_GRP_001, Billing Contact: John Doe, Producer/Broker ID: BRK_12345, Employee Count: 3 (1 subscriber + 2 dependents), Billing Method: Family Unit, Monthly Premium: $1,200.00, Base Commission Rate: 5%, Base Commission: $60.00, Service Fee: $10.00, Total Commission: $70.00

Steps: 1. Monitor BRMS for FlexWork group FW_GRP_001 billing invoice generation trigger. 2. Validate employee count calculated correctly based on enrolled members (subscriber + dependents). 3. Verify billing charges calculated per family unit or age-based rating as configured. 4. Confirm billing contact and producer information included in invoice. 5. Validate total summary of bill charges matches expected premium. 6. Retrieve BRMS invoice for group FW_GRP_001 and validate all amounts through Cirrus. 7. Monitor BASICS for commission statement generation for broker BRK_12345. 8. Validate producer details and demographics included in commission statement. 9. Verify customer ID (FW_GRP_001) and name included in commission statement. 10. Confirm base commission and service fee detail calculated correctly based on premium and commission agreement.

Expected result: FlexWork billing invoice successfully generated in BRMS for group FW_GRP_001. Employee count accurate (1 subscriber + 2 dependents = 3 covered lives). Billing charges calculated correctly per family unit or age-based rating. Billing contact and producer information included in invoice. Total summary of bill charges matches expected premium. Invoice amounts validated through Cirrus with parity. Commission statement successfully generated in BASICS for broker BRK_12345. Producer details, demographics, customer ID (FW_GRP_001), and name included. Base commission and service fee detail calculated correctly based on premium and commission agreement. Commission statement amounts validated through Cirrus with parity.

TC-12 — HIGH — FlexWork ID Card Generation and Fulfillment through COM360

Objective: Validate FlexWork ID card generation and fulfillment through COM360 per F1805595 and F1759299, ensuring ID cards for FlexWork members FW_MEM_001, FW_MEM_002, FW_MEM_003 are generated with correct member demographics, plan details, group information, and delivered to member address.

Preconditions: User is authenticated with valid credentials; Environment is accessible and responsive; Database backups are current; Test data is isolated from production; Audit logging is enabled; All impacted systems are in sync; API connections between systems are established

Test data: Subscriber ID Card: Member Name: Jane Smith, Member ID: FW_MEM_001, Group Name: FlexWork Test Group, Group ID: FW_GRP_001, Plan: FlexWork Medical with EHIPP+NET, Effective Date: 02/01/2026, Copay: $20.00, Deductible: $1,000.00. Dependent ID Cards: Member Names: John Smith (FW_MEM_002), Emily Smith (FW_MEM_003), Relationship: Child, Same group and plan details as subscriber.

Steps: 1. Monitor COM360 for FlexWork ID card generation trigger for members FW_MEM_001, FW_MEM_002, FW_MEM_003. 2. Validate ID card template selected correctly for FlexWork product type. 3. Verify ID card content for subscriber FW_MEM_001: member name, member ID, group name, group ID, plan name (FlexWork Medical with EHIPP+NET), effective date, copay/deductible details. 4. Verify ID card content for dependents FW_MEM_002 and FW_MEM_003: dependent names, member IDs, relationship to subscriber, same group and plan details. 5. Confirm ID cards generated in COM360 with correct formatting and branding. 6. Validate ID card fulfillment triggered for delivery to member address. 7. Verify ID card delivery method (mail or electronic per member preference). 8. Confirm ID card generation and fulfillment status updated in COM360 and Cirrus. 9. Validate ID cards received at member address (or electronic delivery confirmed). 10. Verify ID card details match member and plan information in Cirrus and B&E portal.

Expected result: FlexWork ID cards successfully generated in COM360 for members FW_MEM_001, FW_MEM_002, FW_MEM_003. ID card template selected correctly for FlexWork product type. ID card content accurate for subscriber and dependents: member names, member IDs, group name (FlexWork Test Group), group ID (FW_GRP_001), plan name (FlexWork Medical with EHIPP+NET), effective date (02/01/2026), copay/deductible details. ID cards formatted and branded correctly. ID card fulfillment triggered and delivered to member address per delivery preference (mail or electronic). ID card generation and fulfillment status updated in COM360 and Cirrus. ID card details match member and plan information in Cirrus and B&E portal with parity.

7. Questions to Route Back to the Requirement

• This is a bare Rally strategic theme with no linked Aha ticket. A strategic theme is a roll-up: the extract gives its child hierarchy (capabilities, features and user stories) as metadata only - numbers, titles, owners and states - with no description or acceptance-criteria field, so grounding below is thin by construction and reads at portfolio level rather than requirement level. Drill into a specific feature or user story, or resolve the linked Aha ticket, for requirement-level analysis.

• What is the specific timeline for FlexWork migration phases and which groups/members are in scope for initial migration?

• Are there specific FlexWork product configurations that require priority testing based on customer commitments?

• What is the expected volume of FlexWork claims for Entity Reserve processing validation?

• Which specific HSID 2.0 migration scenarios need validation for FlexWork member portal access?

• What are the specific data transformation rules for UHOPS to USP member migration?
